

Comments

1. This age needs to be configurable.
2. If the answers of the last age questions are NOT equal for the age they only in not equal to the date of birth. For example they are 1990 and 2000 years in 1988. Then, for CM-1.1, I use decision on user information not to be confirmed about it. Instead they can continue to go back using the arrow.
3. This age information NOT allowed to be tagged or captured by PHPBB.
4. By clicking on you return to the questions.
5. User only continue playing the game. However NO DATA can be stored in the cloud (ideally), This depends the related COPIA game.

6. Only available in test version.
7. The Consent Dashboard should be fully functional. However the data may only be stored on the device and NOT in the cloud.
8. For parents in the U.S. only. They will receive an EXTRA consent screen 30 hours after receiving the test one. They will receive the second consent screen ONLY if they agreed in the first consent. No data should be stored to distinguish whether the user gave a 2nd consent or not. If not, user consent is false.
9. This screen is a configurable dialogue box.
10. This is a segment of 6. The privacy notice is 6 pages long. For the full version, always consent and parent consent.
11. The button should remain visible and clickable on the user console.
12. This reference information is related to the consent screen CM-3.7 for the U.S. This is to inform parents the user why they will be receiving a second consent screen.

13. Is this a valid number? There needs to be a check here to see if the number is valid in the number 11 digit.
14. The verification code should be 5 digit maximum. Therefore the code should be randomly generated.
15. The "Restart" button needs as soon as it can only be clicked once every 60 seconds. This prevents the user from restarting and using the code twice. When the time is counting down, a "Cancel" button should appear when it reaches 0:00.
